

Curriculum Vitae

SHINE ZAW

Senior Full Stack Developer

Bangkok, Thailand | +66 0986590940 | shinezaw9531@gmail.com

Portfolio | LinkedIn

SUMMARY

Result-driven Senior Full Stack Developer with 7 years of experience architecting, building, and deploying scalable, high-performance enterprise platforms across FinTech, Payroll, and AI ecosystems. Specialized in advanced frontend and Backend engineering (React, Angular, TypeScript, Asp.Net Core API, Python, etc..) and integrating complex AI/LLM interfaces. Proven track record of optimizing client-side performance, developing secure financial APIs, and managing automated CI/CD pipelines to drive business value.

CORE SKILLS

- **Frontend Architecture:** React.js, Next.js, TypeScript, JavaScript (ES6+), Angular, Vue.js (Nuxt3), React Native, HTML5, CSS3, Bootstrap
- **State Management & Optimization:** Zustand, Redux, Code Splitting, Lazy Loading, Client-side Performance Tuning
- **Backend Architecture:** ASP.NET Core API, Node.js, Python (FastAPI/Django), Java Spring, PHP/Laravel
- **AI & Integration:** AI Interface Development, LLM API Integrations, Open WebUI, RESTful APIs, WebSockets
- **Cloud, DevOps & QA:** Docker, AWS CI/CD, Azure CI/CD, Git, GitLab CI, Jenkins, Playwright QA Automation, SQL Server, MongoDB

EXPERIENCE

Evokehub Co., Ltd | Full Stack Developer - *Feb 2024 – Nov 2025*

- Architected and developed the backend for AuMP, a robust Australian payroll system, leveraging ASP.NET Core Web API (v8) to process automated calculations for PAYG withholding, Superannuation Guarantee (SG), and employee leave entitlements.
- Engineered dynamic reporting tools using DevExpress to generate complex financial payloads, ensuring strict data compliance with ATO Single Touch Payroll (STP) Phase 2 guidelines, including disaggregated gross income and allowance tracking.
- Seamlessly integrated financial workflows with enterprise accounting ecosystems (Xero, MYOB, Employment Hero) via secure REST APIs to synchronize real-time pay-run data and ledger balances.
- Designed AI-driven Payroll Agents and structured document extraction pipelines using Python and LLM APIs to interpret complex Fair Work Modern Awards, automating precise penalty rates and compliance mapping.
- Modeled and optimized MS SQL Server and MongoDB schemas to handle high-throughput processing for sudden pay-run spikes and real-time Payday Super execution tracking.
- Implemented secure authentication and authorization mechanisms by integrating Azure Active Directory to ensure strict data privacy and compliance.
- Built a responsive user interface from scratch using React.js and Tailwind CSS, improving the overall user experience and application speed.
- Optimized application state management by implementing Zustand, which reduced boilerplate code and streamlined frontend data flow..
- Modeled and optimized relational and non-relational database schemas across MS SQL Server and MongoDB for high-throughput data processing.
- Implemented automated end-to-end testing with Playwright and managed enterprise deployment pipelines via Azure CI/CD.

2C2P | Full Stack Developer - *Oct 2022 – Sep 2023*

- Co-developed the Thai Acquiring Portal, building Angular and React frontends backed by an ASP.NET Core API.
- Developed the NearMe Payment API leveraging ISO8583 protocol logic and deployed business-critical production hotfixes for the Myanmar Payment Union (MPU) platform.

- Optimized frontend bundle sizes and streamlined API consumption layers to maintain a high-throughput corporate SMS Gateway.
- Managed automated unit testing, vulnerability scanning, and CI/CD pipelines using GitLab, Jenkins, SonarQube, and Black Duck.
- Provisioned and managed scalable cloud application environments across staging and production instances on AWS.
- Involves combining frontend (React, Angular) and backend (ASP.Net Core API, Node.js, Python(FastAPI) development with cloud infrastructure like AWS Lambda, API Gateway, S3, and RDS to create scalable cloud-native apps.

CB Bank PCL | Full Stack Developer - *Nov 2018 – Sep 2022*

- Master Payment Gateway Service (MPGS), JCB and CB Pay Mobile Banking for daily file settlement generation manually every day.
- Automated financial reconciliation by replacing manual daily file settlement processes for Master Payment Gateway Service (MPGS) and JCB with automated generation systems and then developed automation background job schedular workflows using ASP.NET Console Application(v4.5) to streamline secure transaction data handling and settlement generation.
- Reduced manual processing time and eliminated human error by engineering scheduled background tasks for daily merchant file compilation**.** And then Ensured data compliance and secure transmission of financial settlement files adhering to payment gateway protocols.
- Spearheaded the migration and integration of Mastercard Payment Gateway Services (MPGS) from legacy protocols to EMV 3-D Secure 2 (3DS2) enhancing security compliance.
- Architected end-to-end payment workflows, mapping frictionless and challenge flows to optimize the merchant and payer checkout experience.
- Implemented native mobile authentication via MPGS SDKs, utilizing device telemetry to maximize frictionless transaction rates and reduce cart abandonment.
- Resolved technical integration blockers including CSP header issues, session timeouts, and payload structural errors during the production rollout.
- Designed and executed comprehensive test suites for MPGS 3DS2 version upgrades within the Merchant Test Facility (MTF) environment.
- Validated end-to-end payment behavior using the MPGS 3DS Emulator, successfully testing frictionless passes, step-up challenges, 3DS1 fallbacks, and fraud denials.

- Formulated regression testing matrixes covering card-issuer ACS redirection loops, iframe rendering responses, and final financial authorization responses.
- Collaborated with cross-functional development teams to catch and document payload schema mismatches (authentication.channel, purpose) prior to deployment.
- Streamlined backend banking workflows for CB Bank money withdraw QR booking system by using Java SpringBoot, Python FastAPI and Django.
- Maintained and modernized core consumer banking portals utilizing React.js, AngularJS, Node.js, and PHP/Laravel.
- Built user-facing features and business logic for the CBPay mobile application (iOS/Android), driving end-to-end delivery from backend services to UI screens.
- Supported digital transformation by integrating global card schemes (Visa, Mastercard MPGS 3DS2, JCB) and securing financial communication layers via ASP.NET ISO8583 protocols.

FREELANCE & PROJECT EXPERIENCE

Full Stack Freelancer - *Oct 2023 – Jan 2024*

- Developed a cross-platform social media application using PHP, MySQL, JavaScript, and React Native CLI.
- Engineered real-time instant-messaging systems utilizing Node.js and WebSockets.
- Built robust RESTful APIs and set up automated background processing using PHP and Cron jobs.
- Managed end-to-end deployment, server maintenance, and cPanel/VPS performance optimization.

Freelance Projects

- **Online Book Shop:** Built using ASP.NET and SQL Server.
- **Online School Management System:** Designed and implemented using ASP.NET and SQL Server.

Academic Projects (Technological University, Hmawbi)

- **Hidden Objects Finder Game (2017–2018):** 2D puzzle game developed with Unity Game Engine and C#.
- **TU News Portal (2016–2017):** Dynamic university portal built with PHP, MySQL, Bootstrap, and JS.

- **Encrypted Chat Application (2015–2016):** Secure group chat application utilizing Java Socket Programming and client-server encryption.
- **Student Information System (2013–2014):** Performance-oriented C++ console application for managing student data records.

EDUCATION

- **Bachelor of Engineering (Information Technology)**

  Technological University (Hmawbi) | 2016 – 2018

- **Bachelor of Technology (Information Technology)**

  Technological University (Hmawbi) | 2012 – 2016

LANGUAGES

- **English:** B2 (Upper-Intermediate)
